As with most Hive Five posts, if your favorite was left out, it's not because we hate it—it's because it didn't get the nominations required in the call for contenders post to make the top five. Most of the models run Android Honeycomb, and can pull duty as a media tablet, productivity tool, or ereader. All models come with and run Adobe Flash, have access to the Android Market, and models with 3G data plans offer 3G or 4G wireless access on your tablet while you're on the go. Pricing varies depending on the size, wireless carrier (if any), and amount of storage you're looking for, but the Galaxy Tab starts at \$199, and can get as expensive as \$629.Asus Eee Pad Transformer/Transformer PrimeWith the Eee Pad Transformer and the new quad-core Eee Pad Transformer Prime, Asus has proven there's a place in the tablet market for tablets that function just as well as stand-alone slates as they do when connected to a docking station with a full keyboard. Both Transformer models allow you to use the device as an Android tablet when not connected to the Eee Station dock, and then dock the tablets to work on them like super-thin and super-light Android-based laptops. Both models support Flash, have front and rear-facing cameras for HD video, and have NVidia Tegra graphics inside for mobile gaming. Again, pricing varies based on the storage in each model, but expect to pay between \$399 and \$599 depending on the model you order (or pre-order, since the Transformer Prime makes its North American debut this week.HP TouchpadEven though the HP Touchpad is a discontinued product, and never really sold well when it was available on store shelves, HP's \$99 fire sale to get rid of their excess stock of Touchpads when they discontinued them made them one of the most popular tablets on the market. The Touchpad runs WebOS, and while it doesn't have the same quantity of apps as the Android Market or the iTunes App Store, it does have a good enough number that you can use the Touchpad to check your email, listen to local or streaming music, surf the web, stay in touch with friends on your favorite social networks, and stay productive. The 9.7-inch screen is perfect for video, the front-facing camera is useful for video conferencing over Wi-Fi (there is no 3G). Good luck getting your hands on a Touchpad now at any price, although we're sure you might find some drastically overpriced models available on eBay. Yes, we know the Touchpad doesn't run Android - but it can when unlocked, and you guys voted for it, so we're including it.Barnes and Noble Nook SeriesWhile the new Nook tablet is really the only model that Barnes and Noble is marketing as a proper tablet, the Nook Color is a great option as well, especially once you've rooted it and installed a new ROM. Barnes and Noble has all but condoned the process, and even if you don't root your Nook Color, you get some access to the some apps in the Android Market (through Barnes and Noble), tons of games, streaming video through Netflix and Hulu Plus, and of course access to Barnes and Noble's catalog of millions of books. All models are Wi-Fi only, and the Nook Color will set you back \$199 and the Nook Tablet \$249. Both models feature 7-inch displays, tons of pre-loaded apps, and are a great bang for your buck if you're looking for affordable Android tablets to hack and play with.Acer Iconia Tab SeriesMost of you who voted for the Iconia Tab series specifically liked the A500, a dual-core Wi-Fi Android tablet with Nvidia graphics under the hood for multimedia and gaming. Front and rear-facing cameras are perfect for shooting quick photos and video as well as web conferencing. The A500 is a 10-inch tablet. The W500 is a 10-inch slate, and the A100 is a 7-inch model that's slim and portable. All models run Honeycomb, have access to the Android Market, sports USB ports, and tons of internal storage. If you're shopping for an Iconia Tab, expect to spend anywhere from \$299 to \$549, with the A500s running from \$349 to \$399 depending on how much storage you need.Now that you've seen the top five, it's time to put them to an all-out vote.Honorable mentions this week go out to a pair of tablets that barely missed the cut for the top five, the port-packed Toshiba Thrive and the newly released and media-rich Kindle Fire from Amazon.Have something to say about one of the contenders, or a feature of your favorite we forgot to mention? Did your favorite tablet not get enough nominations to get into the top five? Let's hear it in the comments below. Android updates its operating system regularly to include new features, fix glitches, and make your Android device run more smoothly. The newest version is Android 10, and it offers some great features you'll want to get your hands on. Installing the new OS is not too difficult. Before you install it, you have to make sure your phone is compatible with it and able to receive the latest update, which we can help you with. Then, we'll give you some advice about getting the update. Make sure you have the right phone Julian Chokkattu/Digital Trends Unfortunately, not every Android phone is going to be eligible for the Android 10 update. If your device is over 2 years old, has already received two major Android OS updates, or is a lower-end budget device, you might not be seeing Android 10 at all. We've collected rumors for each of the manufacturers in our Android 10 updates post, so you can check there for the latest news on a variety of devices. However, there are some devices which are a given. All of Google's Pixel phones have already received the update, while the latest flagship phones — like the Samsung Galaxy Note 10 range and Huawei's P30 range — are also highly likely to get the update. You can also safely assume any phone that took part in the Android 10 beta is likely to receive the update. The Android 10 beta program was the largest in Android's history, with an amazing 25 devices from 13 manufacturers taking part. Here's the list of phones that supported the Android 10 beta: Asus ZenFone 5Z Essential Phone Huawei Mate 20 Pro LG G8 ThinQ Nokia 8.1 OnePlus 7 Pro OnePlus 7 OnePlus 6T Oppo Reno Realme 3 Pro Sony Xperia XZ3 Tecno Spark 3 Pro Vivo X27 Vivo Nex S Vivo Nex A Xiaomi Mi 9 Xiaomi Mi Mix 3 5G Google Pixel 3a Google Pixel 3a XL Google Pixel 3 Google Pixel 3 XL Google Pixel 2 Google Pixel 2 XL Google Pixel Google Pixel XL Back up your data While the final Android 10 build won't be as risky as getting involved in a beta program, it's still a really good idea to backup your Android devices regularly and before committing to the upgrade. Make sure to back up your Android phone to your PC to make sure your precious data is as safe as houses. How to install Android 10 So your phone has been confirmed to be getting the Android 10 update — hurrah! Now what? Well, you may have to wait a while. Some manufacturers take a little while to push the update out, whether it's the speedier companies like Nokia, or the slowpokes of Samsung and LG. That usually comes down to how much work they have to do, and creating manufacturer UIs like Samsung's upcoming One UI 2.0 can take a significant amount of time. Thankfully, when your update is ready, it'll be pushed through to your phone and you'll be prompted to upgrade. You can either upgrade right then and there, or you can choose to have your phone install it at a later time when it's more convenient — you can even have it update overnight. If you're really, really excited about it (like us) then you can manually check to see if the update has come in. To do so, head to Settings > System > Advanced > System update > Check for update. If you're not using a stock Android phone, then your path to finding the updates section may be slightly different — for instance on Samsung phones, you can access Software update directly from the Settings app — but it's almost always somewhere in your Settings. That's really all there is to updating to Android 10. Unsure of what's new in the operating system? Check out our Android 10 review. Editors' Recommendations
